Age-defying Clayton Shagal Extracts...

Almost every person who has walked into your spa or clinic has dreaded the sighting of the first wrinkle...

Suddenly, those subtle laugh lines that were once "character enhancing," become downright depressing! Hold that frown formation and counterbalance the appearance of those unwanted fine lines and wrinkles with Clayton Shagal's powerful extracts!

There have been varying opinions and research on the causes of wrinkles and how to diminish them if not eliminate them. The formation of a wrinkle requires loose skin, which is a direct result of loss of elasticity. In short, aging skin manifests first with skin laxity and then is followed with the more visible wrinkling of the skin.

In your mid to late 20's physical changes to the facial skin are less prominent with a slight lowering of the eyebrows. In your 30's, the nasolabial folds become more apparent as they deepen. In your 40's, forehead wrinkles and the onset of crow's feet around the eyes appear.

In your 50's, wrinkles around the mouth and neckline deepen. As well, the cheeks appear to be more sunken with the loss of fat. From your 60's onwards, the loss of elasticity and ability to retain moisture contribute to age-defining skin...

Don't despair! There is hope! Within the last decade of developments in the skin care industry and scientific technology, there are many more options to treating and preventing wrinkles. Even with reconstructive surgery, most skin care practitioners emphasize preventative measures. Clinical treatments can include the use of laser technology in photo-rejuvenation, chemical peels and microdermabrasion for eliminating accumulated dead skin cells, or tightening-toning-lifting using stimulating current.

In addition to professional treatments, your skin requires daily nutrients to keep the skin healthy. This is how home care products play an imperative role in delaying the formation of those unwanted wrinkles and softening existing fine lines.

If you've neglected your daily skin care regimen, give it a boost for 21 to 30 days with Clayton Shagal's essential concentrated proteins: collagen, elastin, cytokines, and hyaluronic acid. These extracts work to replenish the dermis of indispensable nutrients that slow down the aging process.

Our concentrated extracts, combined with the Clayton Shagal gels and creams, help to regenerate the skin's fresh radiance, lifting that dull, flaccid appearance created by the aging process and free radicals.
